Personal Brand Statement / Executive Summary

I'm a dedicated NCAA Division I athlete and Computer Science student who loves building things, solving problems, and pushing myself to improve every day. My background in athletics has taught me discipline, consistency, and how to handle pressure—skills that show up in my work as a developer and teammate. I've worked on real projects using React, databases, Python automation, and full-stack tools, and I enjoy turning ideas into something that actually works. I bring a mix of hard work, curiosity, and a positive attitude, and I'm always looking for ways to learn, help others, and grow into a stronger engineer and person.

Education

Weber State University — Bachelor of Computer Science

Expected Graduation: Spring 2025 | GPA: 3.5

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Windows Applications, Advanced Database Systems, Web and Front-End Development, Software Engineering, Operating Systems, Database Design and Management

Technical Skills

Languages: C++, C#, C, Java, JavaScript, HTML, CSS, Bash, JSON, SQL

Frameworks & Tools: React, Node.js, Docker, WPF, .NET, Express, Vite

Databases: MySQL, MongoDB, OleDb, Firebase

Other: Git/GitHub, Visual Studio, VS Code, Windows, Linux (WSL), Scrum.

Projects

Sport Journey Tracker — React, Firebase

Developed a responsive web app that allows athletes to track their training sessions and visualize progress through dynamic graphs. Integrated Firebase for real-time data and authentication, with a focus on performance and mobile responsiveness.

Recipe App — React, Firebase

Built an interactive recipe manager that lets users create, edit, and save recipes with ingredient lists. Designed a simple UI and implemented Firebase Realtime Database for fast and reliable data storage.

Airline Reservation System — C#, WPF, OleDb

Built a desktop simulation of an airline reservation system with real database connectivity. Implemented flight and passenger management, seat visualization, and separation of business logic from the UI for clean architecture and scalability.

BankApp — React, Node.js, Express, MongoDB

Developed a full-stack banking application allowing users to create accounts, perform secure transactions, and view their transfer history. Implemented authentication, session handling, and modular backend APIs to support scalability and security.

Additional Experience & Skills

NCAA Division I Athlete (3 Years) — Demonstrated discipline, leadership, and time management while balancing academics and athletics.

Languages:

Fluent in English and Spanish; conversational Portuguese.
